TABLE OF CONTENTS

Table of Contents

1.0 Definition of terms

ZETDC – Zimbabwe Electricity Transmission and Distribution Company

ZPC – Zimbabwe Power Company

NTC – National Training Centre

Contract - An agreement between two or more parties that creates enforceable rights and obligations.

Client - A party that has contracted with an entity to obtain goods or services that are an output of the entity's ordinary activities in exchange for consideration.

Income - Increases in economic benefits during the accounting period in the form of inflows or enhancements of assets or decreases of liabilities that result in an increase in equity, other than those relating to contributions from equity participants.

Performance obligation - A promise in a contract with a client to transfer to the client either: a good or service (or a bundle of goods or services) that is distinct; or a series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the client.

Revenue - Income arising in the course of an entity's ordinary activities.

Transaction price - The amount of consideration to which an entity expects to be entitled in exchange for transferring promised goods or services to a client, excluding amounts collected on behalf of third parties.

VAT – Value Added Tax

RE Levy – Rural Electrification levy

2.0 INTRODUCTION

2.1 Purpose and Structure of the Manual

2.1.1 The purpose of the ZESA Holdings (Pvt) Ltd Accounting Procedures Manual is to detail the accounting policies and procedures adopted by ZESA Holdings (Pvt) Ltd. Compliance with the stated procedures is mandatory except with the specific agreement in writing of the Group Financial Controller.

2.1.2 Copies of this manual are held by the following ZESA Holdings (Pvt) Ltd accounting staff in the Finance and Commercial Departments. Copies of the relevant sections of the manual are issued to respective employees in line with their job description.

2.1.3 This accounting procedures manual should be read in conjunction with other related accounting procedures manuals.

2.2 Scope and objectives

2.2.1 The objectives of the Revenue Accounting manual to

- To ensure that all revenue in respect of the supply of electricity and related services is recorded in a timely and accurate manner;
- To ensure that revenue is recognized in accordance with the International Financial Reporting Standards
- To ensure that the company complies and meets the requisite statutory requirements and/or regulation
- To provide management with financial information regarding the company's revenues;

2.3 Basic Features of the Revenue

Postpaid and prepaid client enrollment
Monthly meter reading of postpaid and billing.
Credit control and revenue collection.
Monthly revenue assurance for prepaid clients.

2.4 Accounting Principles and Policies

The accounting principles and policies adopted for the Revenue Billing are as follows: -

- Electricity revenue for post-paid clients is recognized as at the date of actual or estimated meter reading in conjunction with current revenue standards e.g IFRS 15.
- VAT and other levies such as RE levy to be accurately recorded when billing.
- VAT and other levies such as RE levy are collected monthly and remitted to the respective agencies.
- Connection fees are treated as revenue when fully paid and the client has been rendered the service.
- An adjustment for deferred revenue is made at the end of the accounting year in line with the International Financial Reporting standard for revenue IFRS 15

2.5 Changes and Improvements

The manual will be updated when necessary to reflect changes in operating environment, accounting processes and as and when guided by the legislative changes. Suggestions for changes and improvements to the manual should be conveyed, in writing, to the Group Financial Controller whose permission must be obtained prior to any changes being effected.

3.0 Definition of Revenue

Revenue is the money generated from normal business operations, calculated as the average sales price times the number of units sold. It is the top line (or gross income) figure from which costs are subtracted to determine net income. Revenue is also known as sales on the income statement. Revenue depicts the transfer of promised goods or services to the client in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services.

3.1 Revenue recognition

The ZESA group shall follow a five step revenue recognition model, as summarized in fig 1 below:

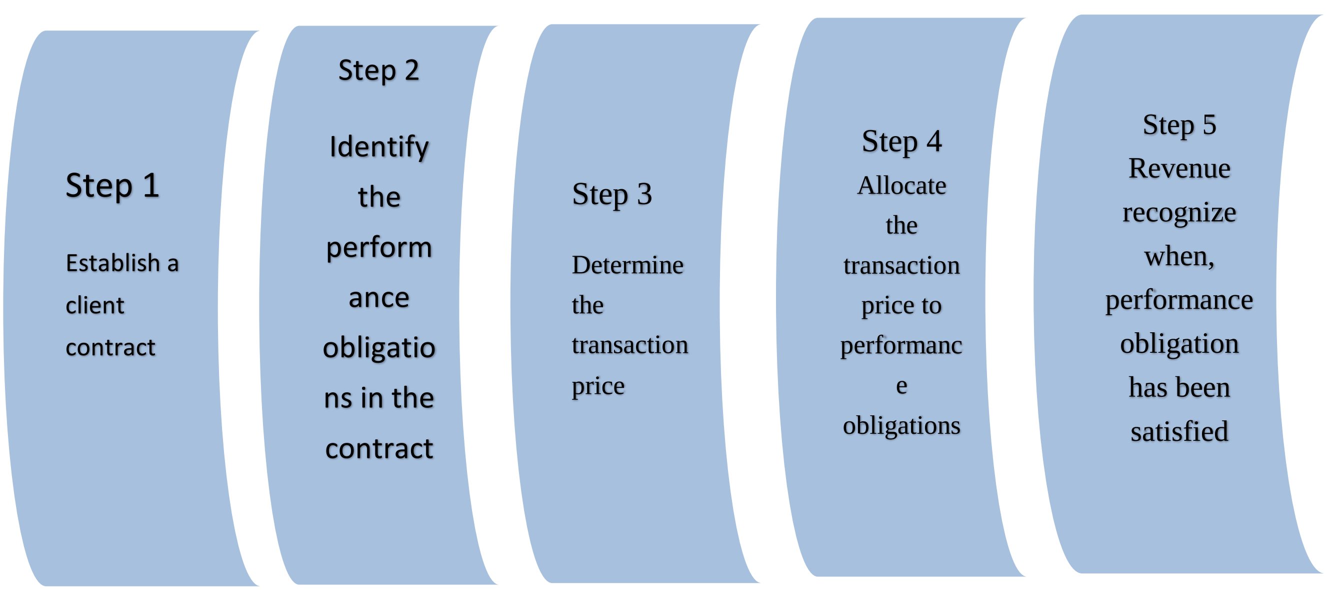

Fig 1

3.1.1 Step 1: Identify the contract with the client

The contract can be written, verbal, or implied and is based on your company's ordinary practices. In summary, the contract should outline the following conditions

* that the contract is approved with a commitment to perform the obligations

* identify each party's obligations

* Identify payment terms

* the contract should be of a commercial substance

The following are the key steps in identifying the contract.

3.1.1.1 Opening an Account

A client account for a consumer is opened upon signing a contract of supply subject to terms and conditions of the Electricity Act Chapter 13:19, Postal and Telecommunications act Chapter 12:05 and other relevant acts.

Electricity and other services are supplied to a client through: -

- An existing point of supply/free port in the case of Powertel or
- A new point of supply.

The procedures applicable to each circumstance are summarized below.

- **<u>Existing Point of Supply</u>**

The applicant visits the relevant office or website to complete relevant sections of the contract of supply and submit to the utility. Refer to Appendix 1 for the respective application forms of the various services.

A service account is created in the accounting system e.g. ICS, SAP Sales and Distribution Module. The relevant office visits the client's premises to verify take-on details for the back office to create the account. After creation of the client account, the client is connected. The client completes a service order or any other relevant form in order to verify the client details such as meter number and meter readings or any other form of identification point. Refer to Appendix 2 for the service order form.

- **New Point of Supply**

The enquirer forwards copies of the duly completed contract of supply to the appropriate Office. Refer to Appendix 3

3.1.2 Step 2: Identify the performance obligations in the contract

There are two distinct obligations

- Transfer of the services or goods that is distinct. These can be categorized per company as follows: -

3.1.2.1ZETDC delivery obligations

3.1.2.1.1 Delivery of electricity to the client

The delivery of electricity obligation is in two parts. Connection of the client to the grid to be regarded as a consumer of electricity and providing the actual flow of electricity to the client.

3.1.2.1.2 Connection of client to the electricity grid

A client pays connection fees upon completing the necessary forms following the existing procedures. Having been satisfied that the client installation meets the ZETDC standards, the client is connected. This obligation is a once off, fulfilled by the commissioning of the client point of supply thus declaring the client a consumer of electricity

3.1.2.1.3 Flow of electricity to the client

There are two distinct approaches to electricity delivery, post-paid and pre-paid.

Delivery obligation – Post-paid

Delivery takes place as soon as the client has been connected to the grid. Once the obligation is fulfilled, the client is invoice in arrears after receiving the service.

Delivery obligation – Prepaid

Delivery obligation arises soon after receiving the payment from the client. The client is provided with a receipt/token as representing the obligation to deliver electricity. ZETDC obligation is to ensure that the client has access to electricity until they have exhausted the prepaid amount on the token. Unutilized tokens or part thereof mean that ZETDC has not fulfilled its obligation

3.1.2.1.4 Delivery obligation to other services

ZETDC provides other services that are related to provision of electricity.

WOCI

A ZETDC client may request for work to be done on their installation at the client premises as well as other services. According to ZETDC policy, the client is provided with a quotation, provides ZETDC with the order to carry out the works based on the quotation. ZETDC proceeds to generate a pro-forma invoice to facilitate payment by the client. Upon receiving the payment, ZETDC proceeds to fulfill the obligation to carry out the service at the client premises.

3.1.2.2ZPC Delivery obligations

ZPC's mainstream product/service is generation of electricity and selling at wholesale price mainly to ZETDC.

Performance obligation is the delivery of electricity to ZETDC. ZPC delivers electricity to ZETDC instantaneously as generation takes place, hence the delivery takes place without any further condition or delay. Failure to deliver entails ZPC stopping generation of electricity. ZETDC should ensure that it is ready to take delivery through its infrastructure. Failure to do so will results in loss of electricity or ZPC having to stop generation.

3.1.2.3 Powertel Delivery obligations

Powertel acts as an agent for the sale/distribution of electricity for ZETDC as well as sale of other services such as internet and data.

3.1.2.3.1 Delivery obligation for electricity

Powertel facilitates the sale of electricity by ZETDC through an agency. A client goes to Powertel and pays for electricity and in exchange, they are provided with a token as a promise of obligation. Powertel acts as a conduit to providing a ZETDC client with electricity. Once the client has paid money to Powertel, it is ZETDC with the obligation to provide the client with the electricity.

3.1.2.3.2 Delivery of data and internet services

Data and internet are a typical distinct services and products.

3.1.2.3.3 Delivery obligation for data services

Client pays for data and they are provided with a voucher representing an obligation. Powertel obligation for delivery is to provide internet access to the client until the voucher is exhausted. This means the obligation is fulfilled piecemeal over time until the voucher is fully utilized.

3.1.2.3.4 Delivery obligation for internet service

In order to access the internet services, the client opens an account with Powertel. Upon opening the account, the client has access to the internet services. The obligation to Powertel, therefore is to ensure that the client has access to the internet services.

3.1.2.4 ZENT Delivery obligations for transformer, concrete poles and other products and services

3.1.2.4.1 New transformers - ZENT manufactures and repairs transformers. Clients pay for new transformers and ZENT delivers the transformers upon confirming the payment by the client.

3.1.2.4.2 Transformer repairs - In the case of repairs, ZENT assesses the work to be carried out, provides the quotation to the client. The client confirms the work to be carried out through an official purchase order based on the provided quotation. After completion of the works, ZENT issues out an invoice to the client for payment before releasing the transformer to the client. The delivery performance obligation for ZENT is to repair the damaged transformer back to its usable state.

3.1.2.4.3 Concrete poles - ZENT manufactures concrete poles for resale. Clients pay for the concrete poles and ZENT delivers the concrete poles upon confirming the payment by the client.

3.1.2.4.4 Construction works – Substations and other structures – ZENT does carryout some type of construction work that is done over a period of time. Such works as construction of a substation can take prolonged periods to complete. The obligations for ZENT are at every completed stage of the construction work until the construction work has been completed

3.1.2.5 ZESA Holdings Delivery obligations

ZESA Holdings provides management and training services, mostly to its subsidiaries. Training services are provided through National Training Centre.

3.1.2.5.1 Delivery obligation for services rendered

Clients request for training services from NTC. NTC provides the clients with quotation for the training required. The client raises an order to NTC, who in turn raises an invoice to the client. The client makes a payment and the training is arranged at the National Training Centre premises. NTC obligation is to provide the access to the venue and requisite facilities for the client run the training.

3.1.3 Step 3: Determine the transaction price

The contracts may vary per each subsidiary, however, each contract may include fixed charges, variable charges, or both. Price determination, therefore varies per each subsidiary according to the nature of business. Price determination per each subsidiary is briefly described below: -

3.1.3.1 ZETDC – Determination of transfer price

ZETDC is the transmitter and distributor of electricity. The price of electricity is defined as tariff (refer to definition of terms). Tariff is defined per each client category, that is, domestic, commercial, industrial, mining and farming.

Tariff determination is guided by the Electricity Act (Chapt13:19) Section 53 and the ZERA Tariff code. The tariff methodology used is **revenue requirement**. The methodology resembles a cost plus mark-up model, which involves a build-up of costs plus an agreed return on assets. After determining the price, ZETDC company submits the tariff to the regulator, ZERA, for subsequent approval before implementation. ZETDC cannot implement a tariff without an approval by the regulator.

In summary, electricity tariff determination is summarized as follows: -

(a) **Through the provisions of the Electricity Act (Chapt13:19) Section 53 and the ZERA Tariff code**

i) Determination of revenue requirement

ii) Preparation of tariff application

iii) Submission of tariff application to ZERA

iv) ZERA dose its due diligence in interrogating the application

v) Stake holder consultations done by ZERA with ZETDC

vi) ZERA awards a tariff in consultation with Shareholder.

(b) In order to mitigate against inflationary movements, an Indexation Procedure is applied as follows: -

The ZWL tariff is indexed based on the exchange rate movement so as to maintain an approved USD denominated tariff. However, the Utility seeks approval for the indexation from ZERA, the Regulator.

3.1.3.2 ZPC Determination of transfer price

ZPC is the wholesale producer of electricity and sales almost whole of it to ZETDC. ZPC sales electricity to ZETDC at whole sale price. ZPC applies the same pricing model as ZETDC. The ZETDC revenue requirement includes ZPC total cost build up, that is, their revenue requirement. Once the tariff has been approved, ZPC is awarded their portion, which becomes cost of electricity to ZETDC.

Conclusively, ZETDC and ZPC use revenue requirement methodology to determine price.

3.1.3.3 Powertel Determination of transfer price

Powertel is the provider of telecommunication services as well as being the consolidator of agents on sale of electricity. On the provision of telecommunication services, Powertel is regulated by POTRAZ in line with the telecommunications Act.

Powertel data prices are determined as follows:

Provision of electricity

Powertel acting as an agent to distribute electricity on behalf of ZETDC, levies a 5% commission to ZETDC. To the final consumer, the tariff remains the same, that is, inclusive of the 5% commission.

3.1.3.4 ZENT Determination of transfer price

ZENT is responsible to provide strategic components in the maintenance of generation and distribution of electricity services within the group. ZENT provides transformers, switch gears, concrete poles, other line material and accessories.

Price determination of ZENT products and services. Important to note, is that, amongst the products and services provided by ZENT, are construction assets. ZENT constructs products such as substations.

3.1.3.5 *National Training Centre (NTC) Determination of transfer price*

NTC provides training services and accommodation to all the subsidiaries in the group.

For variable charges, estimate the amount of variable consideration you're entitled to. You can use the expected value method or most likely amount method to calculate this amount. Pay attention to the timing of the payment and how much time will pass between the transfer of promised goods and services and when the client pays to determine if there is a financing component. If a significant amount of time passes, adjust the transaction price for the time value of money.

3.1.4 Step 4: Matching the prices to the performance obligations in the contract

ZESA Holdings' subsidiaries most products and services as listed above are finished products and services. Therefore, matching prices is a one-time process as opposed to products of a construction nature. In the case of ZENT's construction work, such as substations construction, price is allocated per every stage of completion.

As part of the process of matching the prices to the performance obligations, the following processes are undertaken at ZETDC for the sale of electricity.

3.1.4.1 Meter Reading

Electricity meters are read by District Office/ Depot meter readers (for routine readings and where no other work is performed) or by technicians mainly for Maximum Demand points. Meters are read where any of the following circumstances apply: -

i. Connection of new point of supply.
ii. Connection of existing point of supply for new consumer.
iii. Disconnection at consumer's request.
iv. Disconnection (temporary) for non-payment of account.
v. Disconnection (permanent) for non-payment of account.
vi. Reconnection after payment of charges and reconnection fee by defaulting consumer.
vii. Change of tariff

viii. Change of meter
ix. Increase in supply
x. Decrease in supply
xi. Routine monthly readings for charging purposes
xii. At request of consumer e.g. where the meter is thought to be defective.

Meter readings are in all cases, entered on an itinerary route sheet or Check Reading Form (A275)

3.1.4.2 Assigning a new point of supply to an Itinerary

When a new point of supply is connected, the technician will take details relating to:-

i. Meter number
ii. Meter type
iii. Number of dials
iv. Inspection date
v. Meter Reading
vi. Connection Type

These details are captured in DCS and the job is commissioned. The commissioned job would flag in ICS that it has commissioned. A credit control clerk would then create an account for the commissioned job using information already captured when an application was processed and also adding;

- Client id number
- Telephone number
- Postal Address/ E-mail address

The new service points then defaults to a status awaiting allocation of itinerary. The senior meter reader would the allocate the point to the relevant itinerary and route.

3.1.4.3 Monthly Meter Readings

At the beginning of each month, a route cycle calendar is generated where a scheduled meter reading date is assigned to each itinerary. Each route is printed on the scheduled meter reading date and assigned to a meter reader to take readings. A window period of 3 days is given to read and capture the readings.

All entries on the card must be checked for reasonableness and errors prior to the cards being sent for billing.

3.1.4.4 Estimated Readings

Where the meter reader is unable to gain access to a meter, the ICS generates an estimated reading based on the consumption history of the point. The estimated consumption will be adjusted whenever an actual reading is taken.

3.1.4.5 Consumer Billing

Consumers are billed for electricity consumed, work on consumer's installations (WOCI's) and instalments on deferred connection fees on a monthly basis.

3.1.4.6 Producing the bill (Invoice)

When meter readings are uploaded, bills are generated for all those points where consumption calculated is within preset parameters. In cases where consumption is outside preset parameters an exception is generated and the account will not bill until the issue is verified and resolved. Bills are generated through a batch process overnight and are ready for printing the next day.

3.1.5 Step 5: Revenue recognition criteria

Electricity - Recognize revenue as and when, the entity satisfies a performance obligation. Revenue is recognized upon delivery of a product or service and an invoice raised or over time. If recognizing revenue over time, a single method of measuring progress for each performance obligation is applied, particularly in the case of construction assets by ZENT. Progress is re-measured at each stage of performance obligation. A re-assessment is carried out at the end of each reporting period.

The table below summarizes revenue recognition analysis per each product/service by each company within the group.

Company	Product/Service	Type of product	Revenue Recognition
ZETDC	Electricity	Finished products	When the client has consumed electricity after purchase
ZETDC	Connection fee	Service	When the client has been connected
ZETDC	Reconnection fee	Service	When the client has been invoiced for reconnection after being disconnected for non-payment
ZETDC	Disconnection fees	Service	When the client has been invoiced for non-payment of electricity service
ZETDC	Miscellaneous income and other services and products	Disposal of scrap materials, assets and Work on Consumer Installations	When the client has been invoiced for reconnection after being disconnected for non-payment
ZPC	Sale of electricity to ZETDC and other external clients	Finished product	Upon raising an invoice to ZETDC or external client after supplying bulk electricity
ZENT	Various products for maintenance of ZETDC and ZPC infrastructure	Finished products/service	Upon raising an invoice after supplying the products/service

	Construction products over a period	Construction work	At each stage of completion of the construction work and an invoice is raised
Powertel	Internet data	Finished product	Upon raising an invoice and client consuming the data
	Sale of electricity through agency	Finished product	Upon invoicing the client and the product consumed by the client
National Training Centre (ZESA Holdings)	- Accommodation - Training service	Service	Upon raising an invoice and service provided to the client

4.0 Other income

4.1 Connection Fees

A connection fee is payable in respect of all new, increased and decreased supplies.

4.2 Determination of Connection Fee

Connection fee is determined by the relevant Office with reference to the commercial guidelines. Connection fees are classified into two categories namely standard and non-standard.

4.2.1 **Standard connection fee** is defined and determined in the commercial guidelines and is uniform for all business units.

4.2.2 **Non-standard connection fee** is based on the actual cost of connection. A quotation is presented to the client with a valid period as defined in the commercial guidelines

4.2.3 **Connection fee payment methodology**

As provided for in the Commercial guidelines, connection fees must be paid in full before a client is connected. However, under certain special circumstances, a payment arrangement can be granted to a client. Such a payment arrangement is subject to approval by ZETDC management. The following payment arrangements are available: -

i. Full payment upon acceptance of quotation.
ii. Where the connection fee is not paid in full, a 50% deposit is paid based on a valid quotation and settlement of the remaining balance is paid over 3 months or any other timeframes stipulated in the Commercial guidelines.

A client maybe granted to defer payment to a specified future date upon approval by the local senior official as defined in the commercial guidelines. Details of the conditions to be satisfied before granting deferred terms of payment are set out in the commercial guidelines . All deferred payments must be secured by bank or insurance company or any other approved guarantees. Interest is charged on the outstanding balance at a rate agreed as defined in the commercial guidelines and other relevant legislation or relevant statutory instrument (SI).

iii. Deferred payments on connection fees are only applicable to non-domestic consumers.

It is the responsibility of the relevant office to ensure that the appropriate amounts are paid and, where applicable, guarantee or signed agreements are held by the utility prior to connecting the supply

4.2.4 <u>Connection Fees refund</u>

Connection fee refunds must be approved by the Regional General Manager. Refunds may arise in the following circumstances: -

i. Where the utility fails to meet the connection obligation through unforeseen circumstances.
ii. Where the application to have the work undertaken is withdrawn at the request of the consumer.
iii. Where an additional charge has been made to a new consumer to allow for a refund to an existing consumer, e.g. where a new consumer is connected 'underline' to a line built to an existing consumer.

All connection fee refunds shall be processed within the provisions of the Commercial guidelines and other relevant policies.

4.2.5 Connection Fee Suspense Ledger

Details relating to connection fees for work undertaken by the utility are posted to the connection fees suspense subsidiary ledger through the relevant system such as NDM (Network Development Management system). Connection fees are not raised in respect of work of an internal nature.

The purpose of the ledger is to ensure that all connection fees payable in respect of major capital expenditure are reconciled.

4.3 Work on Consumers' Installations (WOCI)

A client can request to have work carried out at their premises. When work is performed on a consumer's installation at the request of the consumer, the following procedure is followed.

- Client sends request for work to be carried out at their premises.
- An artisan visits the client premises and prepares a bill of quantity.
- Commercial officer generates a quotation based on the bill of quantity
- A proforma invoice is raised to the client
- Client pays for the job to be carried out
- The job is executed and final invoice is raised.
- Client pays for the shortfall between the final fiscal tax invoice and the proforma invoice.
- Refer to Appendix III for sample invoice.

One (fast copy) of the invoice is retained by the depot by which the work was undertaken. The original and the other two copies are sent to the relevant District Office where costs and calculations are checked.

4.3.1 Accounting entries

- Client sends request for work to be carried out at their premises.
- **No accounting entry**

- An artisan visits the client premises and prepares a bill of quantity.
- **No accounting entries**
- Commercial officer generates a quotation based on the bill of quantity
- **No accounting entries**
- A proforma invoice is raised to the client
- ***DR Client*** ***xxxx***
- ***CR Deferred Revenue*** ***xxxx***
- Client pays for the job to be carried out
- ***DR Bank*** ***xxxx***
- ***CR Client*** ***xxxx***

- The job is executed and final invoice is raised.
- ***DR Deferred Revenue*** ***xxxx***
- ***CR Revenue (WOCI)*** ***xxxx***

- Client pays for the shortfall between the final fiscal tax invoice and the proforma invoice.
- ***DR Bank*** ***xxxx***
- ***CR Deferred Revenue*** ***xxxx***

* Refer to Appendix III for sample invoice.

4.4 **Disconnections – For Non-payment of Account**

The ICS system automatically generates disconnection service orders for debts past due date. Reconnection fee is automatically charged upon generation of a disconnection service order. Disconnection service orders are printed and issued to credit control assistants who effect disconnections and take the disconnection reading.

Accounting entries and revenue recognition

DR Client	**XXX**
CR Miscellaneous Income	**XXX**

Upon raising the disconnection notice

DR Bank	**XXX**
CR Client	**XXX**

Recovered through clients' payments

4.4 Other miscellaneous income

Other miscellaneous income – There are various income items grouped under miscellaneous income.

- Fraud miscellaneous charges – Charges levied on customers who have tempered with ZETDC infrastructure. The charge is made up of two items; amount billed for the illegal consumption and a penalty levied for the tempering with infrastructure.
- Disconnection fees - levied for disconnecting customers either voluntary on non-voluntary
- CIU replacement – Charge for replacing Customer Interface unit
- Printing Statement – A charge for printing a customer statement on request by customer
- Inspection fees – Charge levied on customer to have their premises inspected for purposes of connecting them to the grid.
- Re-inspection fees - Charge levied on customer to have their premises re-inspected if it previously failed the initial inspection for purposes of connecting them to the grid.
- Uprating – Levy charged on customer for uprating their energy uptake from a lower level to a higher level.
- Token reversal/token clearance/ Electricity Units transfer – Levied on customer for transferring their energy units from one meter to another

4.5 Month End Procedures

The following schedules and reconciliations are prepared by each company at business unit level on a monthly basis.

4.5.1 Billing Statistics Report

4.5.2 Sales movement schedule (C12 Report (Monthly Summary of KwH Sold And Revenue)

A report is prepared for each parameter listed below; -

a. By district
b. By Client Service Centre
c. By tariff
d. By total
e. Prepared in the form of a monthly trend analysis

4.5.3 VAT Report

4.5.4 Levies Report

4.5.5 Interest on Overdue Accounts

4.5.6 Connections Report

4.5.7 List of clients not billed

4.5.8 Cycle Meter Readings Statistics

4.5.9 Service Order Summary

4.5.10 Disclosure in the Financial Statements

4.5.11 Sales of Electricity

Revenue from the sale of electricity is shown net (i.e. excluding Development Levy and VAT) in the Statement of comprehensive Income and described as "Sales of Electricity".

4.5.12 Interest Receivable

Interest charged in respect of deferred connection fees and late payment of accounts is included with all other interest income and described as "Interest Receivable" in the Statement of comprehensive Income.

4.5.13 Connection Fees

Connection fees are included in "Miscellaneous Revenue" in the Statement of comprehensive Income.

4.5.14 Other miscellaneous income

All other income including reconnection fees, fraud charges, sale of scrape and other income associated with client account management are grouped as miscellaneous income.

APPENDICES
