

Student Name: Maxcen Isheunesu Chikwira

Program: Computer science

Supervisor: Mr M Chivinge

December Report

At the start of December, I was given the opportunity to work in the support section alongside Mrs Future and Mrs Nyemba. This department is responsible for providing user systems support for various systems such as ICS, SMARTVEND, and MDN. This experience allowed me to apply the knowledge I had gained from Mrs Future and Mrs Nyemba and bridge the gap between theory and practical application. I was excited to be part of a team that helps users troubleshoot their technical issues and ensure that their systems are running smoothly. Working in the support section has been a good experience, and I have learned so much from my colleagues and the users we support.

Software Support:

in the support department one of my tasks was to prepare machines that were previously used and assign them to new users. I was trained on how to format a machine from scratch and install all necessary software applications required by the users. This included creating an admin account, adding the machine to the domain, and installing various applications such as Windows 10, Microsoft Outlook, Microsoft Office, ICS, SAP, Any Desk, and Team Viewer.

The most commonly used applications by users were ICS and Smartvend for USD and ZW conversion. Users often required assistance with resetting passwords, unlocking accounts, and ensuring that they were able to receive receipts without any issues. It was a great learning experience for me to be able to assist users with their technical issues and ensure that their systems were running smoothly.

In addition I also learned how to troubleshoot when the Smartvend is not receipting or reprinting a receipt. I also managed to know how to troubleshoot ICS when the user is receiving an error message during login. Through my experience and training, I have developed a strong understanding of these applications and can quickly identify and resolve any technical issues that arise

Update on BE

I had been tasked with completing the Business Excellency Module Knowledge Centre, which was a crucial part of our organization's efforts to improve its operations. We identified a change that needed to be made, as per the General Manager's instructions. I worked closely with my team to implement the change successfully, and we were able to achieve the desired results. We also developed a Knowledge Centre using the Django framework, which would soon be integrated with the entire Business Excellency system. The presentation of our work was well-received, and we received positive feedback from senior management, which was a testament to our hard work and dedication.

Networking

In addition to support I also learned how to make configurations in proxy settings. Proxy configurations involve setting up intermediary servers between a user's device and the internet. This allows users to access internet resources indirectly, providing benefits such as improved security, privacy, and network performance. Proxy configurations typically include specifying the proxy server's address, port, and authentication settings. We also did this when setting up a new machine to allow access to the internet. By learning how to configure proxy settings, I gained valuable knowledge on how to ensure secure and efficient network usage.

Lessons Learnt

- To ask and also make use of internet when looking for solution to a problem.
- the usefulness of AnyDesk and TeamViewer, which allow remote access to users' devices without physical presence. It showed that challenges can be addressed remotely through these apps.
- Developing troubleshooting skills is a necessity.
