SUBJECT: REQUEST FOR EMPLOYEE ENGAGEMENT FORUM WITHIN BUSINESS EXCELLENCE

We kindly request for an employee engagement forum within Business Excellence encompassing features that promote transparency, communication, collaboration and problem-solving among employees and management. The forum serves as a platform where employees can raise queries, get feedback and track the status on query resolution. The platform should have the following key features:

1. User-Friendly Interface

The forum should have an intuitive and user-friendly interface that allows employees to easily navigate through the platform, submit queries, and allow for feedback.

2. Query Submission

Employees should be able to submit their queries or concerns through the forum. This feature should include fields for detailing the issue, categorizing it appropriately and attaching any relevant documents or screenshots.

3. Feedback Mechanism

The forum should enable employees to provide feedback on various aspects of the organization, such as processes, policies and initiatives. This feedback can help management identify areas for improvement and make informed decisions.

4. Status Tracking

The feature should also have the ability to track the status of query resolution. Employees should be able to see updates on their submitted queries, including who is handling them and what actions have been taken.

5. Notification System

The forum should have a notification system that alerts employees when there are updates on their queries or when new discussions are initiated on topics they are interested in.

6. Moderation Tools

To maintain a productive and respectful environment, moderation tools should be in place to monitor discussions, address inappropriate behaviour and ensure compliance with organizational guidelines.
